

## **Box Light (In Focus) LCD Projector**

### **Projector set-up**

1. Disconnect the TV presenter black cable from the PC CPU video monitor socket.
2. Replace it with the projector short black cable. Look on the bottom of the cable hub for “PC video connection” to chose the correct cable.
3. Plug the computer monitor cable into the project cable hub, labeled “PC monitor”.
4. Plug the “In focus” cable connector into the projector box.

### **Projector Usage**

1. Turn the projector ON.
2. Turn the computer ON.
3. Run your show or put the projector on “Stand-by” until you are ready. \*
4. Put the projector on “stand-by” to cool it down. \*\*
5. Turn the computer OFF.
6. Turn the projector OFF.

\*The projection will be brighter if we minimize the dust sucked in. Try not to hook up the project until last minute. Keep the project covered with the sheet when turned off.

\*\*Think of this as a fancy slide projector. The bulb is very expensive and we need to protect it. So make sure the bulb has cooled down before you turn the fan off (main power button).
